

# CPT208 Human-Centric Computing

---

## Section A: Basic Information

---

### 1. Brief Introduction to the Module

---

Human-Centric Computing is a level one module that provides students with up-to-date guidelines, concepts and models for designing and evaluating interactive systems.

Students will learn theories and methodologies in designing and implementing graphical user interfaces through practical tools.

---

### 2. Key Module Information

---

| Item           | Content                                                                                                                    |
|----------------|----------------------------------------------------------------------------------------------------------------------------|
| Module Name    | Human-Centric Computing                                                                                                    |
| Module Code    | CPT208                                                                                                                     |
| Credit Value   | 5                                                                                                                          |
| Semester       | SEM2                                                                                                                       |
| Pre-requisites | CPT105 OR CPT111                                                                                                           |
| Programmes     | BEng Digital Media Technology / BSc Information and Computing Science / BSc Information Management and Information Systems |

---

### 3. Module Leader & Contact Details

---

#### Module Leader

| Field          | Information                                                  |
|----------------|--------------------------------------------------------------|
| Name           | Yue Li                                                       |
| Email          | <a href="mailto:Yue.Li@xjtlu.edu.cn">Yue.Li@xjtlu.edu.cn</a> |
| Office         | SD457                                                        |
| Phone          | 81883223                                                     |
| Office Hours   | Wednesday 9:00–11:00                                         |
| Contact Method | Email                                                        |

**Biography:**

Dr. Yue Li is an Associate Professor at XJTLU. Her research focuses on Human-Computer Interaction (HCI), especially VR/AR applications in cultural heritage and education. She leads the HER Lab.

---

**Co-teacher**

| Role       | Name    | Email                                                          | Office | Office Hours          | Contact   |
|------------|---------|----------------------------------------------------------------|--------|-----------------------|-----------|
| Co-teacher | Teng Ma | <a href="mailto:Teng.Ma@xjtlu.edu.cn">Teng.Ma@xjtlu.edu.cn</a> | SD459  | Wed & Thu 16:00–17:00 | In-person |

---

**Section B: Module Information**

**1. Educational Aims**

This module aims to:

- Understand design process in computing systems
- Cover requirement gathering, design, prototyping, evaluation
- Apply interaction design methods in practical projects
- Evaluate usability and user experience

---

**2. Learning Outcomes**

Students will be able to:

- A. Apply user-centered design approach emphasizing equality, diversity, and inclusion
- B. Create and deploy interactive systems with legal, ethical, and professional considerations
- C. Evaluate usability and user experience using established criteria

---

**3. Teaching Methods**

- Lectures: 2 hours/week
- Seminars: 2 hours/week
- Private study: ~7 hours/week
- Continuous assessment + final exam

## 4. Syllabus & Teaching Plan

| Week | Mode            | Topic                    | Pre-reading      |
|------|-----------------|--------------------------|------------------|
| W1   | Lecture/Seminar | Module Introduction      | Chapter 1        |
| W2   | Lecture/Seminar | Discovering Requirements | Chapter 11       |
| W3   | Lecture/Seminar | Conceptual Prototyping   | Chapter 12, 13   |
| W4   | Lecture/Seminar | Evaluation Methods       | Chapter 8, 9, 10 |
| W5   | Lecture/Seminar | Design Principles        | Chapter 2, 3     |
| W6   | Lecture/Seminar | Prototyping Fidelity     | Chapter 12, 13   |
| W7   | Lecture/Seminar | Reading Week             | Chapter 4, 5, 6  |
| W8   | Lecture/Seminar | Poster Day               | —                |
| W9   | Lecture/Seminar | Usability Testing        | Chapter 14, 15   |
| W10  | Lecture/Seminar | Interfaces & Research    | Chapter 7        |
| W11  | Lecture/Seminar | Field Study & Analytics  | Chapter 15, 16   |
| W12  | Lecture/Seminar | Coursework Demo          | —                |
| W13  | Lecture/Seminar | Revision                 | —                |

## 5. Assessment Details

### 5.1 Coursework (40%)

| Task                            | Weight | Release     | Due               |
|---------------------------------|--------|-------------|-------------------|
| Poster Presentation             | 16%    | 06 Mar 2026 | 24 Apr 2026       |
| Portfolio + System + Video Demo | 24%    | 06 Mar 2026 | 10 May 2026 23:59 |

### AI Permissions (Coursework)

#### Poster

- Allowed: image generation, grammar correction

- Not allowed: core idea generation, research conclusions

## System & Video

- Allowed: coding assistance, debugging, video editing
- Must include reflection on:
  - Prompts used
  - Code verification
  - Ethical considerations
- Must cite AI tools used

---

## 5.2 Exam (60%)

| Type       | Weight | Duration |
|------------|--------|----------|
| Final Exam | 60%    | 2 hours  |

---

## Resit

| Type | Weight |
|------|--------|
| Exam | 100%   |

---

## 6. Reading Materials

### Optional Textbooks

- The Design of Everyday Things — Donald Norman
- Interaction Design — Preece, Rogers, Sharp

### Reference Books

- Human Computer Interaction — Dix et al.
- Designing the User Interface — Ben Shneiderman
- Research Methods in HCI — Lazar et al.
- User Centered System Design — Donald Norman

---

## Section C: Additional Information

### 1. Student Feedback

- Collected via online module survey
  - Used for improving teaching quality
-

## 2. Attendance

---

- Attendance is mandatory
  - Recorded via AMS system
- 

## 3. Coursework Rules

---

- Follow university Code of Practice on Assessment
  - Late submission penalties apply
- 

## 4. Mitigating Circumstances

---

- Submit via e-Bridge
  - Must be before deadline if possible
- 

## 5. Academic Integrity

---

Includes penalties for:

- Plagiarism
  - Collusion
  - AI misuse
  - Fabrication
- 

## 6. AI Policy

---

- Each assessment has specific AI allowance rules
  - Must follow module handbook instructions
- 

## 7. Learning Platform

---

- Learning Mall Core: lecture materials & resources
- 

## 8. Communication

---

- Official communication via email / LMS
- 

## 9. Support

---

- Contact module leader or academic advisor
- University student support services available
